## NOTICE

**to foreign students upon arrival from China, in particular from the province of Chu-pej (Hubei), whose administrative center is Wu-chan (Wuhan) city, from the Coronavirus occurrence areas**

Currently, epidemics of Coronavirus 2019-nCoV disease are reported, affecting almost all areas of China.

**What is a Coronavirus 2019-nCoV:** belongs to a group of viruses that cause disease in animals and humans with varying degrees of severity. The name has derived from the characteristic arrangement of the surface lipid envelope structures of viruses in shape of solar corona. Coronavirus 2019-nCoV can cause not only the common symptoms of colds such as coughing, respiratory problems, fever, but also severe illnesses such as severe pneumonia.

**How it is transmitted:** it gets transmitted by air, droplets. Most often it affects the mucous membranes of the upper and lower airways.

**The time from infection to the onset of symptoms:** 1 - 14 days

**What to do after returning from the risk area:** if you are traveling from the risk area, monitor your health conditions for 14 days. In the case of any febrile illness (with temperatures or fevers), unexplainable fatigue, muscle pain, headache, cough, respiratory distress, a suspicion that this may be the case of Coronavirus disease needs to be ruled out. Do not leave your apartment and contact your attending physician immediately, or emergency medical service at 155.

Dated 31 January 2020

Zdeňka Jágrová, MD.

Head of [Public Health Authority of the city of Prague](#)
